Wind energy is a rapidly growing source of renewable energy, and model predictive control (MPC) is a powerful tool for optimizing the performance of wind energy conversion systems (WECSs). This book provides a comprehensive overview of MPC for WECSs, covering the latest advancements in the field and providing detailed explanations, practical examples, and cutting-edge research.

Key Features

- Provides a comprehensive overview of MPC for WECSs, covering the latest advancements in the field
- Offers detailed explanations, practical examples, and cutting-edge research

- Written by leading experts in the field
- Ideal for engineers and researchers working on the optimization of WECSs

Table of Contents

1. to MPC for WECSs
2. MPC for WECSs: Basic Concepts
3. MPC for WECSs: Advanced Concepts
4. MPC for WECSs: Applications
5. MPC for WECSs: Future Research Directions

About the Authors

The authors of this book are leading experts in the field of MPC for WECSs. They have extensive experience in the development and application of MPC for WECSs, and their work has been published in numerous top-tier journals and conferences.

Free Download Your Copy Today

This book is essential reading for engineers and researchers working on the optimization of WECSs. Free Download your copy today to learn the latest advancements in MPC for WECSs and to improve the performance of your wind energy systems.
